53-54. (Canceled)

55-56. (Withdrawn)

57-61. (Canceled)

62-67. (Withdrawn)

68. (Previously presented) A motor assembly for use with a pump, the assembly comprising:

a motor shaft that has a first end with a first surface geometry with an eccentric cross sectional configuration;

a fan impeller that is installed on the motor shaft proximate the first end of the motor shaft;

a first washer that is disposed on a side of the fan impeller that is away from the first end of the motor shaft;

a second washer that is disposed on a side of the fan impeller that is toward the first end of the motor shaft;

a shaft extension that has a first end with a second surface geometry with a non-circular cross section and is coupled to the first surface geometry of the first end of the motor shaft; and

a pump impeller assembly that is coupled to the shaft extension and includes a lower bearing assembly that receives a fitting that is pressed onto the shaft extension.

69. (Canceled)

70. (Withdrawn)

71. (New) A motor assembly as recited in claim 68, in which the cross section of the first surface geometry is hexagonal.

72. (New) A motor assembly as recited in claim 68, in which the cross section of the first surface geometry is square.

73. (New) A motor assembly as recited in claim 68, in which the first surface geometry defines a compartment within the motor shaft.
